Research Project submitted in partial fulfilment of the requirements for the degree of Master of Professional Accountancy, Unitec New Zealand, 2006
Abstract

This project investigates the characteristics of firms in New Zealand who choose to expense versus capitalise expenditures for internally generated development projects. Using a sample of 315 NZ firm-year observations, I find that the decision to expense versus capitalize is influenced by profitability, financial health and the intensity of a firm’s research and development (R&D) programme. Firms which capitalise R&D are smaller, less profitable, more likely to be in financial distress, and have higher intensity R&D programs. These results suggest that New Zealand firms are similar to firms in other countries who seem to make choices among accounting alternatives in a way to manage reported earnings.
Acknowledgements

I wish to acknowledge all the people who have assisted in the completion of this research project.

My particular thanks go to my supervisor, Professor Shane Moriarity, for his guidance, constructive comments and very valuable input throughout the time I have been working on this project.

I would also like to thank my family for their great support and assistance.
