

The background of the slide features a soft-focus photograph of medical supplies. On the left, a white plastic pill bottle is tipped over, with several light blue, oval-shaped tablets scattered on the surface. To the right, a silver stethoscope is positioned over a portion of a white computer keyboard, with its chest piece resting on the keys. The overall lighting is bright and clinical, creating a professional and healthcare-oriented atmosphere.

PDRP: Fit for future purpose?

Dr. Samantha Heath
Lecturer in Nursing, Unitec
Australasian Nurse Educators Conference
(ANEC)
Dunedin, November 2019

01

ABOUT THE RESEARCH

Explanatory -sequential mixed methods

PHASE 1

Postal survey mailed to participants across the organisation. 129 eligible for the study. 64% response rate (n =86)

ANALYSIS

Surveys analysed, Results reported. Questions developed for Phase 2.

PHASE 2

Semi-structured interviews with 14 volunteers. Nurses voice to explain curious findings

INTERPRETATION

How have nurses' explained the curious findings and what does this mean?

NURSE D

.and to get a peer to do the same for you as an assessment is probably what stops them and it's definitely what stopped me

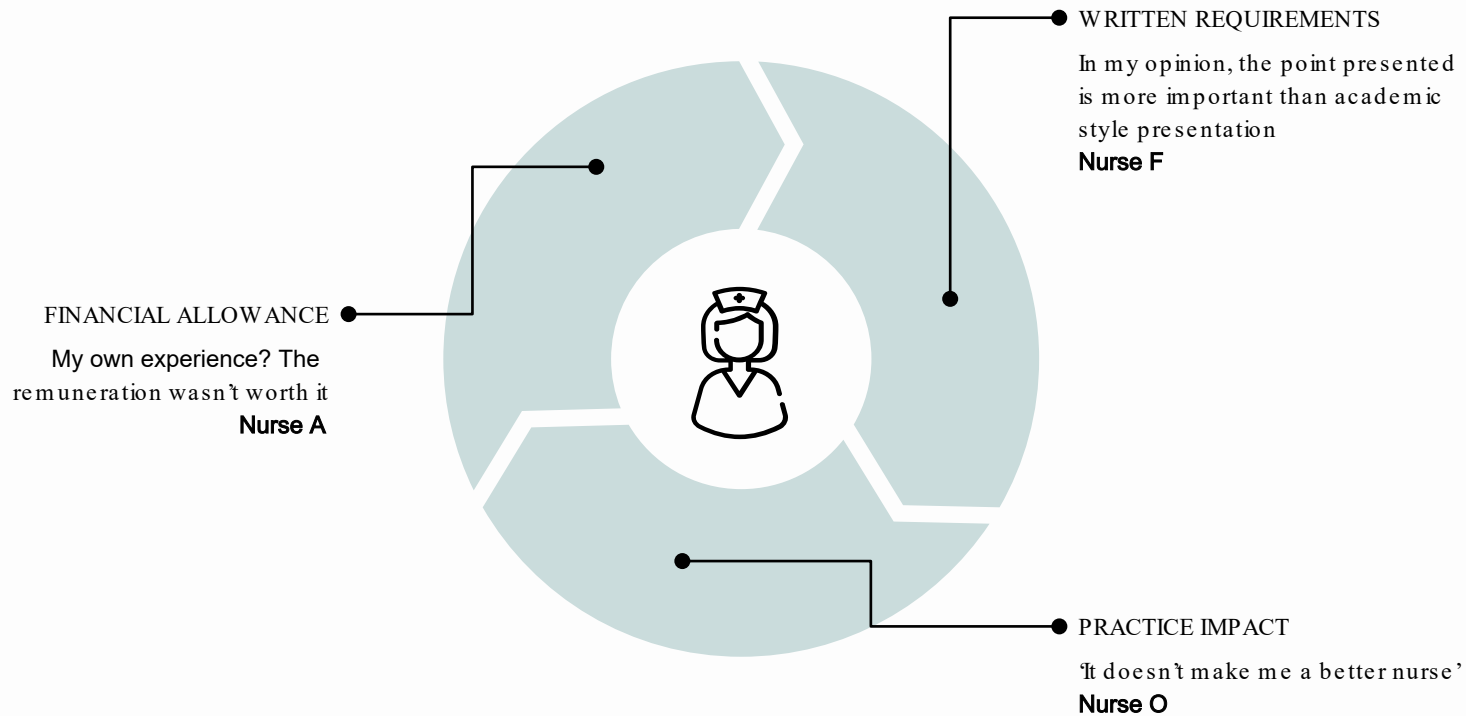

NURSE F

To be honest I did it [PDRP] so wouldn't get audited

NURSE M

.it takes a long time you don't realise each of those domains and everything takes a long time

‘It seems very sad to me that there is more negative out there than positive about it.’

Nurse H

‘We saw Nurse X go through the process and she always put a lot of pressure on herself and was quite vocal with how difficult it was and I think people hear that.’

Nurse K

‘... you say, PDRP or competencies and everyone seems to have a panic reaction.’

Nurse M

1
Nurses'
Union

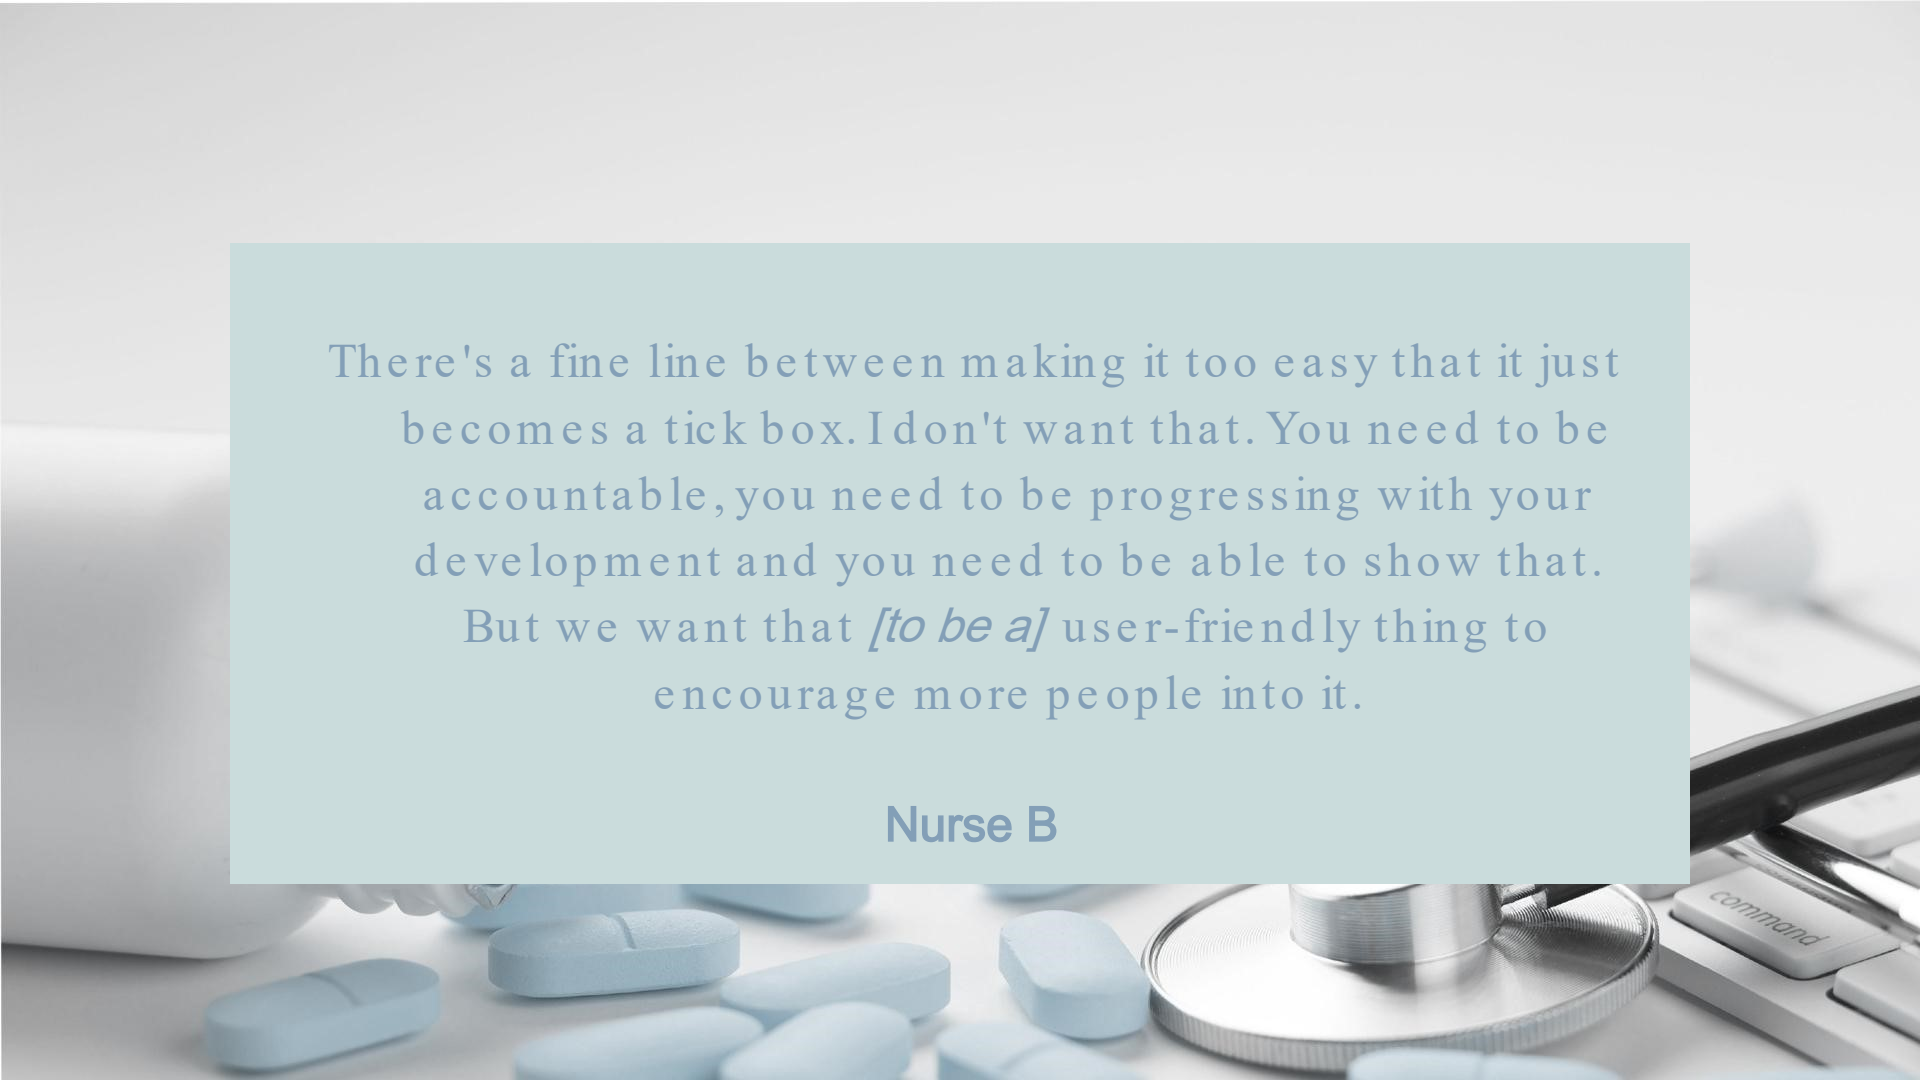

1. Inclusion of regulatory requirements has overshadowed the legitimate professional development opportunity PDRP represents

2. PDRP has become an ecology so large that it fails to meet the educational needs of nurses and impact the downstream health outcomes of patients

3. PDRP has an extremely poor reputation within the profession and this might be part of the voluntary engagement problem

The background of the slide is a soft-focus photograph of medical supplies. In the foreground, there are several light blue, oval-shaped pills scattered on a white surface. To the right, a silver stethoscope is partially visible, resting on a white computer keyboard. The keyboard has a 'command' key visible. The overall lighting is bright and clean, creating a professional and clinical atmosphere.

There's a fine line between making it too easy that it just becomes a tick box. I don't want that. You need to be accountable, you need to be progressing with your development and you need to be able to show that. But we want that *[to be a]* user-friendly thing to encourage more people into it.

Nurse B

THANK-YOU!
